Web Developer (Junior)

Role Description:

The role will focus on website development, application configuration of content management systems like SharePoint, Sitefinity and Ektron, and management of client hosting infrastructure. This individual will work with other more experienced web developers to deliver best practise web solutions and support our existing client websites and hosting. The right candidate will have a related degree and one to three years of industry experience.

Personal Responsibilities:

- Web development and application configuration
- Maintenance and support for existing websites and hosting services

Skills/Knowledge Desirable:

- Experienced in Asp.Net (preferably C#), .Net framework 2+ and Visual Studio 2005/8
- Experienced in Systems Integration and Web Services, XML and XSLT
- Experienced in Microsoft SQL Server, stored procedures and database administration
- Experienced in Windows Server 2003/8, IIS 6/7, hosting, DNS and network configuration
- Useful also content management solutions, SharePoint, Ektron, Sitefinity, DotNetNuke
- Useful also Microsoft SharePoint Shared Services and MOSS 2007/10
- Useful also version control systems, we use Subversion
- Useful also ecommerce solutions, such as AspDotNetStorefront
- Useful also HTML, DHTML, CSS, Flash.

Personal Situation: The right candidate will already be based in Bournemouth or the surrounding area, alternatively if they are relocating they **must have strong ties to the area** such as family.
